

1. Github - resolve conflict w/ 2 feature branch

Step 1, base: feature-branch-A
Compare: feature-branch-B } merge. a branch to build one feature safely.

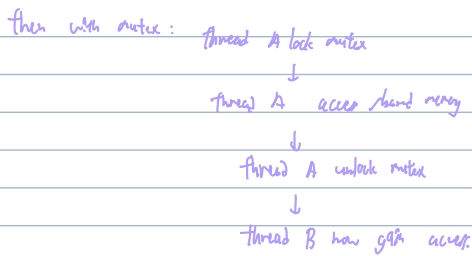

*if same file conflict github will ask.

2. SDRAM shared memory -

3. mutex - mutual exclusion (a lock prevent multiple things from accessing shared data at same time).

if thread A } trying to modify some memory at same time
thread B }
Data corruption + race condition.

4. intercore communication (flag).

Different CPU core communicate with each other.
↳ using flag-based synchronization
